

Detail Sheet

ARMORZONE Plastic Water Filled System – Temporary

Product summary

Status	Accepted
Category	Temporary – Water Filled Longitudinal Barriers
Test Level	Test Level 1 (NCHRP 350): 50km/h May be considered for operating speeds up to 70km/h (TL-2) with Manager SSE prior approval.
Supplier	Ingal Civil Products
Description	Temporary barrier made up of 2 metre long plastic units joined using the ARMORZONE twin pin and filled with 520 litres of water.

Introduction and purpose

This detail sheet supplements *VicRoads' Road Design Note* 06-04 - Accepted Safety Barrier Products. Please refer to RDN 06-04 for the current VicRoads acceptance status, information on the product assessment process and general acceptance conditions.

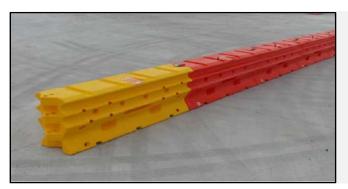

The technical details within this document have been extracted from information submitted to VicRoads by the Supplier and the recommended 'Conditions for Use' from the Austroads Safety Barrier Assessment Panel (ASBAP).

VicRoads requirements take precedence over the product manual and Austroads conditions. Where a departure from these requirements is required, users should understand the risks and document their engineering decisions.

For more detailed product information, refer to the individual product manual or contact the System Supplier.

Technical information

The ARMORZONE Plastic Water Filled System Barrier should be designed, installed and maintained in accordance with the following VicRoads conditions for use.

These conditions for use have been based on an Austroads assessment of technical performance against AS/NZS 3845 and contain VicRoads specific requirements when necessary.

Typical installation arrangement shown above.

Summary Conditions for Use

Accepted configuration	ARMORZONE Plastic Water Filled System Barrier – Temporary • Orange barrier units • Yellow terminal end units
Variants	Nil
Deflection	1.5m metres
Product manual reviewed	Released October 2018
ASBAP issue	30 October 2018

Refer VicRoads conditions for use (below).

Detail Sheet	Page 1 of 4	2nd edition	January 2019	
	_		· ·	

VicRoads Conditions for Use

Tested design requirements

Containment level	Speed	Speed Vehicle mass (km/h) (kg)	Point of Redirection (m)*		Minimum length of	Anchor/Pin Spacing	Dynamic deflection	Working width	Notes
ievei	(KM/h)		Leading	Trailing	barrier (m)	(m)*	(m)	(m)	
NCHRP 350 TL-2	70	2000	16	27	78	N/A	1.5	1.5	Minimum length includes two development lengths

Approved Terminals and Connections

Crash Cushions or Terminals must be fitted to both ends of a barrier					
Public Domain Products					
W-Beam Guardrail	Not permitted				
Thrie-Beam Guardrail	Not permitted				
Type F Concrete Safety Barrier	Not permitted				
Proprietary Products					
Armorzone Plastic Water Filled Terminal System – Temporary	 Terminal end unit (yellow in colour) must be empty. Permitted as a terminal on a flare 				

Design Guidance

System width (m)	0.45			
Installation	This product must be installed and maintained in accordance with the Product Manual and Road Agency specifications. Road Agency specifications and standards shall have precedence.			
Minimum distance to excavation	1.50 metres minimum distance between the edge of the barrier and the edge of an excavation.			
Slope limit	Side slope limit: 10 Horizontal to 1 Vertical (10%).			
	Side slopes must be considered to minimise manual handling risks and site conditions.			
Systems conditions	Flaring across the clear zone without a terminal listed below is not permitted.			
	Installation on top of a kerb is not recommended, however if installed on top of a kerb, all system components must be free to operate.			
Gore area use	Permitted – consider speed and deflection limitations			
Pedestrian area use	Permitted – consider potential for snagging and deflection.			
Cycleway use	Permitted – consider potential for snagging and deflection.			
Frequent impact likely	Permitted			
Remote location	Permitted			
Median use	Permitted – consider speed and deflection limitations

Detail Sheet	Page 2 of 4	2nd edition	January 2019

Foundation pavement conditions

Submitted Foundation Pavement Conditions							
Pavement	Use	Accepted Speed (max)	Post/pin spacing (m)	Pavement construction	Post/pin type		
Concrete	Permitted						
Deep lift asphaltic concrete	Permitted						
Asphaltic concrete over granular pavement	Permitted	70km/h	Refer to the Product Manual	Foundation pavement conditions must be smooth and free of snag points, kerbs or obstructions that may interfere with the operation of the product	Refer to the Product Manual		
Flush seal over granular pavement	Permitted						
Unsealed compacted formation	Permitted						
Natural surface	Permitted						

Other considerations and comments

Damaged Components

Damaged components must be replaced. Repaired components must not be used.

Approval for use at 70km/h

Armorzone may be considered for operating speeds up to 70km/h (TL-2) with Manager Safe System Engineering prior approval. All submissions must be emailed to the M-SSE and must demonstrate the following at a minimum:

- 1. Consideration of alternate safety barrier options,
- Compliance with this detail sheet (e.g. length, deflection, terminals, maintenance).
- Controls to guarantee the product is installed, inspected and maintained in accordance with the requirements of the licensed product supplier.
