

PORTABOOM

Portable boom gates that are a safe traffic control method that protect a workzone.

PRODUCT OVERVIEW

The portaboom is an electronic portable boom gate designed for safer temporary traffic control. The boom gate is controlled from a safe zone by a wireless remote, which removes the need for a traffic controller to be directly exposed to active roads. Portaboom is easy to operate and a highly visible, physical traffic barrier which enables worksites to replace unsafe stop/slow practices.

PORTABOOM

PORTABOOM® units are remotely controlled onsite by a traffic controller at a safe distance from active work sites, which uphold the safety of not only the traffic controller but also the general public.

The PORTABOOM® is an electronic portable boom gate designed for safer temporary traffic control. The boom gate is controlled from a safe zone by a wireless remote, which removes the need for a traffic controller to be directly exposed to active roads.

KEY FEATURES & BENEFITS

- Redefines safety and best practice
- Easy to set-up, no tools required
- Rapid deployment. It takes less than 3 mins to set up the portaboom.
- Traffic controllers have more mobility onsite to conduct regular sign checks, assist pedestrians and local residents
- Traffic controllers have greater productivity onsite
- Reduces fatigue and enhances the alertness of traffic controllers
- Provides superior workzone protection
- The physical barrier provides the ability to implement a rapid site shut down, securing the workzone
- Provides a clear instruction for motorists to slow down upon approach to the workzone
- The PORTABOOM® tower is made from strong powder coated steel and is bright orange for strong visibility

APPLICATIONS

- Active Construction Sites
- Standard Roads
- Freeways and Highways
- Tunnel and Event Closures
- Security check points and access control to worksites
- Pedestrian management
- Temporary parking site & access management
